The Purpose

Outer London yield, or Central London Prestige?

This project analyses whether outer London's higher yield outperforms Central London's strong growth - using five years of Land Registry sales data and ONS rental statistics across all 33 boroughs to guide a £1.5M Buy-to-Let allocation.

Hypothesis

Outer London's yield advantage outweighs Central London's growth strength.

Scope

33 boroughs x 4 property types, 80,010 transactions, 2020-2025 Land Registry & ONS data.

The Recommendation

Barking & Dagenham, Semi-Detached

District

Barking & Dagenham

Property type

Semi-Detached

Yield

4.65%

5-Yr CAGR

+4.91%

Rank

1 of 32

* **CAGR** - Compound Annual **Growth** Rate is the average yearly price change over the 5 years (2020-2025).

The Breakdown

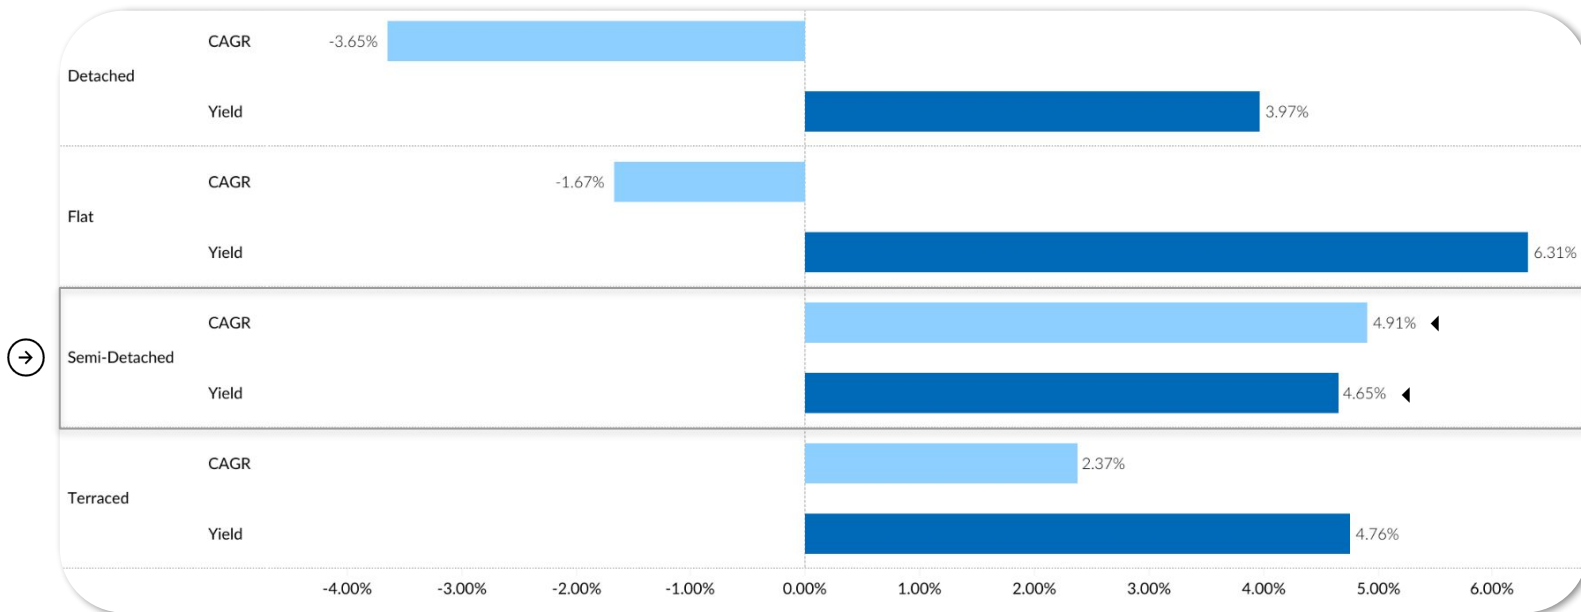

Highest yield doesn't always win.

Detached & Terraced

Detached is weakest on both (3.97% yield, -3.65% growth).
Terraced is solid (4.76% yield, +2.37% growth), just outclassed by Semi-Detached's stronger growth.

Flat vs. Semi-Detached

Flat has the higher yield (6.31%) — but negative growth (-1.67%) drags it down. Semi-Detached is weaker on yield alone, but strong on both, and that combination wins.

The Map

Confirmed across every district

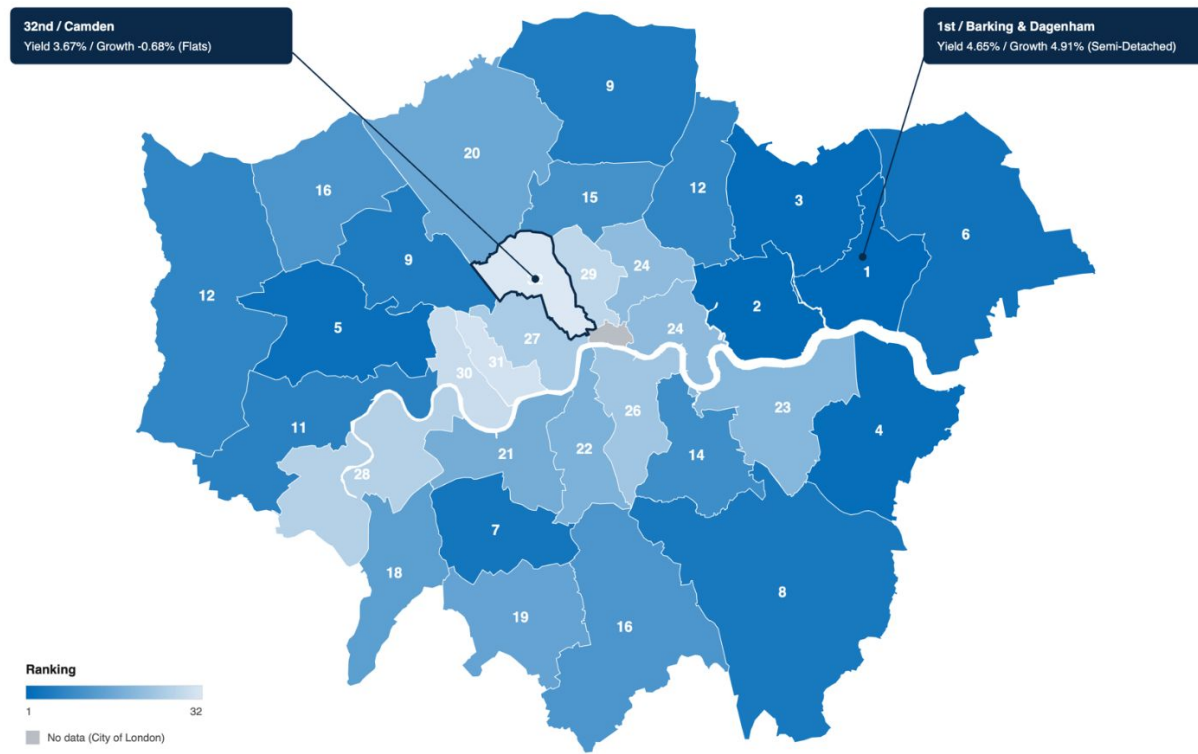

Each borough's best-scoring property type, combining yield and growth into one rank. Outer London leads; Central London's prestige boroughs rank lowest despite premium prices.

1st

Barking &
Dagenham

32nd

Camden

The Leaders

The Top 5, out of 120 combinations.

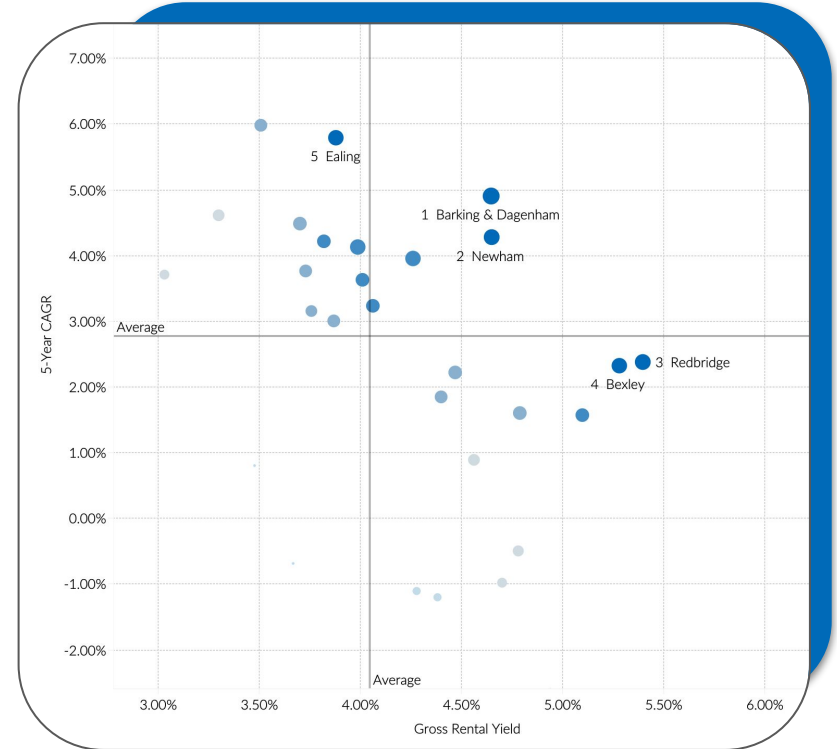

The Best of Both

Not only the best yield or the best growth.

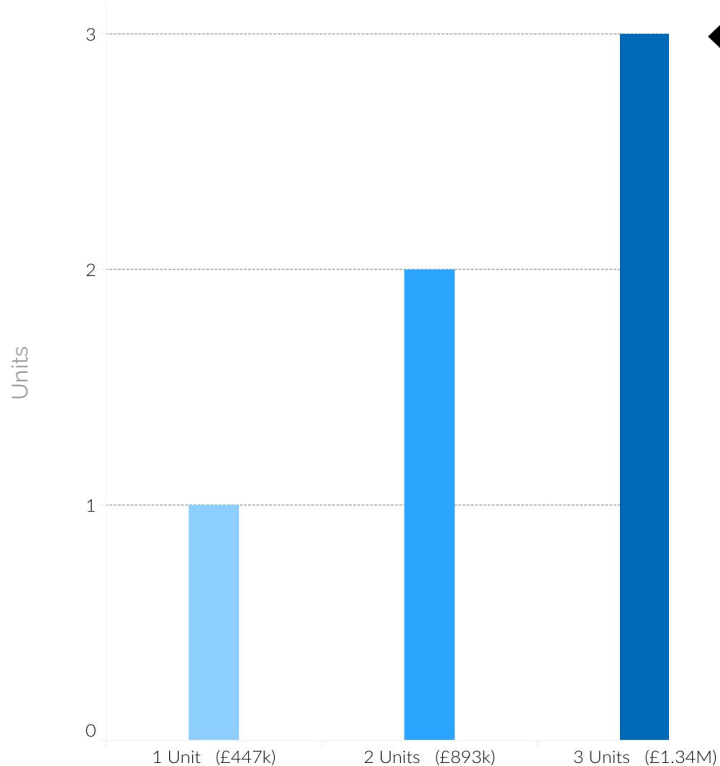

But the best of both, in one type.

Ealing's growth (5.79%) is the strongest of the five, but its yield (3.88%) is the weakest, leaving it short.

Whereas Barking & Dagenham has no weak side — strong on both, and that's what wins.

The Budget Reality

What £1.5M buys in Barking & Dagenham

At £446,525 per unit, £1.5M covers 3 Semi-Detached properties in Barking & Dagenham — with roughly £160,000 left in reserve
