

# Phase 1: Ask

**Business Scenario:** A real estate advisory broker is tasked with creating a London acquisition strategy for an overseas client (Dubai-based investor) looking to invest £1.5M in equity into Buy-to-Let (BTL) residential real estate.

**Business Task:** Analyse London sales and rental data to rank the 33 districts by entry price accessibility, Gross Rental Yield, and 5-Year Capital Growth—identifying whether the £1.5M budget is better deployed across multiple high-yield outer London units or fewer Central London assets.

## Stakeholders:

- **Primary Stakeholder:** Private Client / Overseas Investor (£1.5M Capital Budget)
- **Audience:** Investment Advisory Board
- **My Role:** Lead Real Estate Data Analyst

## Target Data Sources:

- **HM Land Registry (Price Paid Data):** Official UK residential transaction sales prices (2020–2025).
- **ONS / GLA Private Rental Market Statistics:** Official median monthly rents.

## Core Questions:

1. Which districts deliver the highest Gross Rental Yield across different property types (Flats, Terraced, Semi-Detached, Detached) for optimal capital allocation?
2. How many residential units can the client acquire across different London districts within their £1.5M budget?

## Primary Metrics:

- **Median Purchase Price (£):** Capital entry barrier per district.
- **Gross Rental Yield (%):** Annual rental income relative to purchase price (unlevered cashflow metric).
- **5-Year Capital Growth (CAGR %):** Compound annual growth rate of property value appreciation from 2020 to 2025.

## Core Deliverables:

- **Master Cleaned Dataset:** Google Sheets (Data Prep / Formulas).
- **Interactive Dashboard:** Tableau (district Choropleth, Scatter Plot, Bar Charts).
- **Executive Assets:** Documentation, Slide Deck, 1-Page Executive Brief.

# Phase 2: Prepare

## Data Sources & Business Application:

- **HM Land Registry (Price Paid):** Official residential sales data (2020–2025) via [gov.uk](https://gov.uk); used to determine entry pricing and 5-year growth rates.
- **Price Index of Private Rents, UK:** Monthly private rental prices and index statistics used to calculate gross rental yields. ([ons.gov.uk](https://ons.gov.uk))

## Data Organization & Storage:

- **Directory Structure:** Google Drive staging folders for raw Land Registry and PRMS assets.
- **File Formats:** Raw CSV imports consolidated into Google Sheets staging environments.

## Credibility Audit (ROCCC):

- **Reliable:** Statutory registry filings and formal governmental surveys.
- **Original:** Primary records sourced directly from UK Government authorities.
- **Comprehensive:** Full coverage across 33 districts for the 2020–2025 period.
- **Current:** Represents the complete historical baseline and current market logs.
- **Cited:** Published under Open Government Licence v3.0.

## Licensing, Privacy & Integrity:

- **Licensing & Privacy:** OGL v3.0 compliance with zero GDPR/PII risk; no personal identity data included.
- **Data Integrity:** Import counts verified and schema validated against official dictionaries.

## Limitations & Cleaning Mandates:

- **Scope Reduction:** Isolate 33 Greater London districts from the national 20M+ row dataset.
- **Schema Alignment:** Aggregate transaction records to match pre-calculated rental medians.
- **Data Sanitization:** Standardize district nomenclature, clean currency strings, and fix postcode formatting.

# Phase 3: Process

**Objective:** Clean, optimize, and structure raw sales and rental data to enable accurate district-level data joins and reliable rental yield calculations.

## Data Cleaning Framework

| Step                             | Execution Objective                                                                            |
|----------------------------------|------------------------------------------------------------------------------------------------|
| 1. Pruning & Deduplication       | Drop irrelevant columns and duplicate rows to maximize processing speed.                       |
| 2. Null Audit                    | Evaluate missing values to prevent data loss while removing incomplete records.                |
| 3. Text Standardization          | Apply TRIM and standardized casing (UPPER).                                                    |
| 4. Data Formatting               | Convert dates to ISO format (YYYY-MM-DD) and prices to integer currency (£).                   |
| 5. Feature Engineering & Joining | Combine address fields and merge rental data via XLOOKUP.                                      |
| 6. Metric Calculation            | Compute Gross Rental Yield ((Annual Rent / Purchase Price) * 100) rounded to 2 decimal places. |
| 7. Outlier Filtering             | Exclude non-market transactions to preserve statistical accuracy.                              |

## Dataset 1: Raw Land Registry London Sales Data 2020 - 2025

### Raw Schema (16 Fields):

unique\_id, price\_paid, deed\_date, postcode, property\_type, new\_build, estate\_type, saon, paon, street, locality, town, district, county, transaction\_category, linked\_data\_uri

## 1. Pruning & Deduplication

---

### Column Reduction:

- **linked\_data\_uri**: Dropped redundant web link metadata.
- **county**: Dropped as all records are within Greater London.
- **town** & **locality**: Dropped due to high sparsity and location overlap; retained **district** as the single primary key for London districts.

### Non-Market Filtering:

- Filtered **transaction\_category** to retain **Category A** (standard residential sales at full market value)
- Excluded ~19,000 **Category B** records (reposessions, corporate buyouts, bulk transfers) to prevent non-market prices from distorting yield calculations.
- Dropped the column post-filter.

### Deduplication:

- Executed a full-table duplicate audit across all remaining columns simultaneously.
- Confirmed zero duplicate rows were found, leaving **80,191 unique records** in the cleaned dataset.

## 2. Null Audit

---

- **Geographic Mapping Cleanup:** Purged 17 records with missing `postcode` data to ensure spatial accuracy.
- **Critical Field Validation:** Confirmed 0 nulls across core fields (`price_paid`, `deed_date`, and `district`).
- **Logical Null Retention:** Preserved blanks in `saon`; empty strings represent single-dwelling assets without secondary unit identifiers.

## 3. Text Standardisation

---

- **Whitespace Sanitization:** Executed automated trimming to remove leading and trailing spaces across 5 identified records.

- **Casing Validation:** Ensured consistent `UPPER` formatting on key join fields (`district`, `postcode`) for all 80,191 records to ensure seamless relational matching.
  - **district:** Inspected the filter drop-down's **33 unique London district values** to confirm uniform uppercase formatting.
  - **postcode:** Verified uniform uppercase formatting via formula `(=COUNTIF(ArrayFormula(Exact(D2:D, Upper(D2:D))), False))` across the entire column, returning **0 non-conforming entries**.

4. Data Formatting

**Currency Validation:** Converted `price_paid` to integer-based £ values to strip decimals to facilitate investment yields calculations at a later stage.

**Date Normalization:** Standardized `deed_date` to official UK chronological formatting (DD-MM-YYYY) across all **80,191 unique records** to ensure temporal integrity and enable precise time-series aggregation.

## 5. Feature Engineering & Categorical Decoding

---

**Temporal Extraction:** Extracted **Sale Year** from **Deed Date** (`=YEAR(C2)`) to enable multi-year pricing trends and transaction volume analysis (2020–2025).

**Categorical Decoding:** Standardized single-character database codes into full text descriptors across three categorical attributes to eliminate legend lookup dependencies and streamline Tableau visualization.

### Schema Transformations & Logic:

#### Property type

- **Before → After:** "F" → "Flat" | "D" → "Detached" | "S" → "Semi-Detached" | "T" → "Terraced" | "O" → "Other"
- **Formula:** `=SWITCH(F2, "F", "Flat", "D", "Detached", "S", "Semi-Detached", "T", "Terraced", "O", "Other", "Other")`

#### New Build

- **Before → After:** "N" → "No" | "Y" → "Yes"
- **Formula:** `=SWITCH(G2, "Y", "Yes", "N", "No", "Unknown")`

#### Estate Type

- **Before → After:** "L" → "Leasehold" | "F" → "Freehold"
- **Formula:** `=SWITCH(H2, "F", "Freehold", "L", "Leasehold", "Other")`

#### Full Address

**Before:** FLAT 19 | HENRY HOUSE | RINGERS ROAD (split across 3 columns)

**After:** FLAT 19, HENRY HOUSE, RINGERS ROAD (single column)

- **Formula:** `=TRIM(TEXTJOIN(", ", TRUE, I2, J2, K2))`

## BEFORE

|    | B          | C          | D        | E             | F         | G           | H            | I             | J                    | K        | L       | M        | N           |

**Dataset 2:** (Raw) Price Index of Private Rents, UK: monthly price statistics

**Raw Schema (24 Fields):**

Time period, Area code, Area name, Region or country name, Index, Monthly change, Annual change, Rental price, Index one bed, Monthly change one bed, Annual change one bed, Rental price one bed, Index two bed, Monthly change two bed, Annual change two bed, Rental price two bed, Index three bed, Monthly change three bed, Annual change three bed, Rental price three bed, Index four bed, Monthly change four bed, Annual change four bed, Rental price four bed

## 1. Pruning & Deduplication

---

### Column Reduction:

- **Index & Percentage Columns:** Removed bedroom-specific columns and all 15+ index/rate-of-change metrics (Index, Monthly/Annual Change), to isolate absolute monthly property-type rents (£).
- **Retained Fields:** Time period, Area name, Rental price (All), Rental price detached, Rental price semi detached, Rental price terraced, Rental price flat

### Geographic Filtering:

- Filtered Region or country name to isolate London local authorities for the 2020–2025 timeframe.
- Excluded national totals (United Kingdom), non-London regions, and non-applicable flag rows ([z]).
- Dropped Region or country name column post-filter.

### Deduplication:

- Executed a full-table duplicate audit across combined date and district fields.
- Confirmed **zero duplicate rows**, leaving a clean, continuous time-series dataset.

## 2. Null Audit

- **Missing Value Check:** Audited all rental price columns for missing values using:
- **Formula:** `=COUNTBLANK(A2:K)`
- **Validation:** Confirmed **0 null values** across the whole table

A screenshot of an Excel spreadsheet. Cell M44 is highlighted with a blue border and contains the formula `=COUNTBLANK(A2:K)`. Below it, in the same column, a cell displays the result '0'.

## 3. Text Standardization

- **Whitespace Sanitization:** Applied `TRIM` across `Area name` to remove stray spaces.

- **Casing Alignment:** Converted `Area name` to uppercase `=UPPER(...)`, to ensure 1:1 relational matching against the Land Registry `district` column when joining.

A screenshot of an Excel spreadsheet. The formula bar at the top shows `=UPPER(B2)`. The spreadsheet has columns A, B, and C. Column A is labeled 'Time period' and contains 'Jan-20', 'Feb-20', and 'Mar-20'. Column B is labeled 'Area name' and contains 'Barking and Dagenham'. Column C is labeled 'Column 3' and contains the formula `=UPPER(B2)`. A tooltip for the formula bar shows 'BARKING AND DAGENHAM'.

## 4. Data Formatting

- **Date Standardization:** Reformatted period strings (e.g., Jan-20) into ISO standard date format (01-MM-YYYY) to serve as a uniform join key with sales deed dates.

| 1  | Time period | Area name            | Rental price | Rental one |
|----|-------------|----------------------|--------------|------------|
| 2  | Jan-20      | BARKING AND DAGENHAM | £1,232       | £          |
| 3  | Feb-20      | BARKING AND DAGENHAM | £1,235       | £          |
| 4  | Mar-20      | BARKING AND DAGENHAM | £1,237       | £          |
| 5  | Apr-20      | BARKING AND DAGENHAM | £1,238       | £          |
| 6  | May-20      | BARKING AND DAGENHAM | £1,238       | £          |
| 7  | Jun-20      | BARKING AND DAGENHAM | £1,238       | £          |
| 8  | Jul-20      | BARKING AND DAGENHAM | £1,239       | £          |
| 9  | Aug-20      | BARKING AND DAGENHAM | £1,240       | £          |
| 10 | Sep-20      | BARKING AND DAGENHAM | £1,242       | £          |
| 11 | Oct-20      | BARKING AND DAGENHAM | £1,243       | £          |
| 12 | Nov-20      | BARKING AND DAGENHAM | £1,245       | £          |
| 13 | Dec-20      | BARKING AND DAGENHAM | £1,246       | £          |
| 14 | Jan-21      | BARKING AND DAGENHAM | £1,249       | £          |
| 15 | Feb-21      | BARKING AND DAGENHAM | £1,252       | £          |
| 16 | Mar-21      | BARKING AND DAGENHAM | £1,255       | £          |
| 17 | Apr-21      | BARKING AND DAGENHAM | £1,255       | £          |
| 18 | May-21      | BARKING AND DAGENHAM | £1,252       | £          |
| 19 | Jun-21      | BARKING AND DAGENHAM | £1,250       | £          |
| 20 | Jul-21      | BARKING AND DAGENHAM | £1,249       | £          |
| 21 | Aug-21      | BARKING AND DAGENHAM | £1,251       | £          |
| 22 | Sep-21      | BARKING AND DAGENHAM | £1,254       | £          |
| 23 | Oct-21      | BARKING AND DAGENHAM | £1,257       | £          |

- **Currency Formatting:** Formatted all rental price columns as standard integer currency (£).

## 5. Relational Logic & Join Preparation

- **Composite Key:** Added 'Join Key' (DISTRICT YYYY-MM) combining district and date.
- **Formula:** `=C2 & " " & TEXT(B2, "yyyy-mm")`
- **Reference Table:** Rents table is now ready to feed monthly rents into sales table via `XLOOKUP`

|   | A                            | B           | C                    | D            |
|---|------------------------------|-------------|----------------------|--------------|
| 1 | Join Key                     | Time period | Area name            | Rental price |
| 2 | BARKING AND DAGENHAM 2020-01 | 01-01-2020  | BARKING AND DAGENHAM | £1,232       |
| 3 | BARKING AND DAGENHAM 2020-02 | 01-02-2020  | BARKING AND DAGENHAM | £1,235       |

\*now continuing with the Sales table step 5:

**Dataset 1:** Raw Land Registry London Sales Data 2020 - 2025

**Raw Schema (16 Fields):**

Unique Id, Join Key, Price paid, Deed Date, Sales Year, Postcode, Property Type, New Build, Estate Type, Full Address, Street, District, Est. Monthly Rent, Est. Annual Rent, Gross Rental Yield

**5. Relational Logic & Join Preparation**

- **Add Join Key:** Added Join Key (DISTRICT YYYY-MM) merging district name and the chronological deed\_date.
- **Formula:** =L2 & " " & TEXT(D2, "yyyy-mm")

- **Monthly Rent lookup (Column M):** Added Est. Monthly Rent into the sales table using XLOOKUP based on standardized housing classifications.
- **Data Schema Alignment Note:** HM Land Registry records property structure types (Flat, Terraced, Semi-Detached, Detached) rather than bedroom counts. Monthly rents were mapped using property classification proxies to enable 1:1 join integrity with ONS rental statistics.

- **Formula:**

```
=IFS(
  G2="Flat",          XLOOKUP(B2, 'RENTS DATA'!A:A, 'RENTS DATA'!L:L),
  G2="Terraced",      XLOOKUP(B2, 'RENTS DATA'!A:A, 'RENTS DATA'!K:K),
  G2="Semi-Detached", XLOOKUP(B2, 'RENTS DATA'!A:A, 'RENTS DATA'!J:J),
  G2="Detached",      XLOOKUP(B2, 'RENTS DATA'!A:A, 'RENTS DATA'!I:I)
)
```

## 6. Outlier Filtering & Initial Aggregation

- **District & Property Type Yield Summary:** Built a pivot table (Pivot by Gross Yield) calculating AVERAGE Gross Rental Yield grouped by District and Property Type.
- **Outlier Removal:** When creating, identified a yield outlier in the pivot table (Bromley), sorted the sales dataset by **Price Paid**, and deleted a £1 transaction distorting the metrics.

## 7. Combined Ranking (JOIN table)

- Combined Yield + Growth Ranking:** Built a join table (**JOIN table**) merging Pivot by District and Pivot Capital Growth via a concatenated Join Key (**DISTRICT PROPERTY TYPE**), ranking every District × Property Type combination on Yield and CAGR together, rather than one metric at a time.

|    | A                                  | B                    | C             | D                                 | E               | F     | G        |
|----|------------------------------------|----------------------|---------------|-----------------------------------|-----------------|-------|----------|

- Top 1 Champion (Champion Ranking):** A second tab isolates the 32 Champions and ranks them against each other, to surface London's single best-performing combination rather than 32 separate district-level bests. Tied scores share a rank and the next rank skips (e.g. two combinations at 76 both rank 9th, next is 11th) — standard competition ranking, not an error.

## Phase 4: Analyse

**Objective:** Rank District × Property Type combinations — not districts or property types in isolation — by combining Gross Rental Yield and 5-Year Capital Growth to identify the strongest capital allocation within the £1.5M budget.

### Key Findings & Data Aggregations

**Combined Yield + Growth Ranking:** Ranked District × Property Type combinations by combined Yield and CAGR position (JOIN table), rather than by district alone — the strongest opportunity isn't always the district with the single highest yield or single highest growth, but the specific property type within a district that's strong on both.

#### Top-performing combinations:

- Barking and Dagenham, Semi-Detached at 4.65% yield, 4.91% CAGR
- Newham, Terraced at 4.65% yield, 4.28% CAGR
- Redbridge, Flats at 5.40% yield, 2.38% CAGR

....versus a weak combination in Camden, a borough whose reputation would suggest a stronger position:

- Camden, Semi-Detached at 1.75% yield, -6.36% CAGR

---

**Strategic Capital Allocation:** To maximise return on the **£1.5M capital budget**, capital should target the property type with the strongest combined yield and growth — not the highest number on either metric alone (JOIN table ranking).

Semi-Detached in Barking and Dagenham ranks #1 of all 120 District × Property Type combinations in London, with **4.65% yield, 4.91% CAGR**. While flats in that same district yield more (**6.31%**), **they actually lost value in real terms over the period (-1.67% CAGR)**.

For comparison, this combination also beats a single prime-central acquisition outright (Kensington & Chelsea: **3.48% yield, 0.80% CAGR**), which one would usually associate with having the best yields and CAGR.
